7:00 - 8:00pm Reception

Food for Thought: How a high meat diet impacts our health, the environment and the food supply

WEDNESDAY, APRIL 9th 6:00-8:00 PM
OHSU - OLD LIBRARY AUDITORIUM, PORTLAND

Robert S. Lawrence, MD is the Center for a Livable Future Professor in the Department of Environmental Health Sciences at the Johns Hopkins Bloomberg School of Public Health with joint appointments as Professor of Health Policy, International Health, and Medicine. He is the founding Director of the Johns Hopkins Center for a Livable Future, which supports research and develops policies related to the public health impacts of industrial food animal production, improving food security, and adopting healthier diets.

Dr. Lawrence will provide an in depth look at the following:

- US meat consumption and the adverse effects this has on our health, the health of our environment, and the sustainability of a diverse food system.
- The health impacts of a high meat diet and how this leads to the displacement of a diet of adequate quantities of whole grains, fruits, and vegetables.
- Health hazards that have been introduced in the meat due to the industrialization of production methods for raising animals for food.

For more information and to sign up to attend, visit
