Trends in food consumption

Average daily per capita calories from the U.S. food availability, adjusted for spoilage and other waste (USDA)

Trends in energy expended at work

Transportation to work 1960 - 2009

Sources: U.S. Census Bureau, Decennial Census, 1960, 1970, 1980, 1990, 2000;
U.S. Census Bureau, American Community Survey, 2009.

Preventing obesity

- Avoid sugary drinks and fast food
- Drive less, walk and bike more
- Prepare your own food
- Watch less TV
- Sleep more
- Don't sit all day
- Have wealthy parents

- Where do the heaviest Oregonians live?
- What about those places contributes to excess weight?

Obesity data
from DMV
records

Oregon Health Authority
Environmental Public Health Tracking

DMV records are a valuable resource for obesity surveillance in Oregon

Mean BMI, Oregon BRFSS and DMV

— Women DMV — Women BRFSS - - - Men DMV — Men BRFSS

Age-adjusted estimates from Oregon BRFSS and DMV records, adults 18-84

	10 Highest Avg. BMI	10 Lowest Avg. BMI
1	WARM SPRINGS	ASHLAND
2	IRRIGON	LAKE OSWEGO
3	WILLAMINA	SUNRIVER
4	SILETZ	WEST LINN
5	GRAND RONDE	BEND
6	STANFIELD	SISTERS
7	CHILOQUIN	CORVALLIS
8	LAFAYETTE	CANNON BEACH
9	WINSTON	PORTLAND
10	AUMSVILLE	HOOD RIVER

DMV records 2003-2010, among the 200 most populous places in Oregon

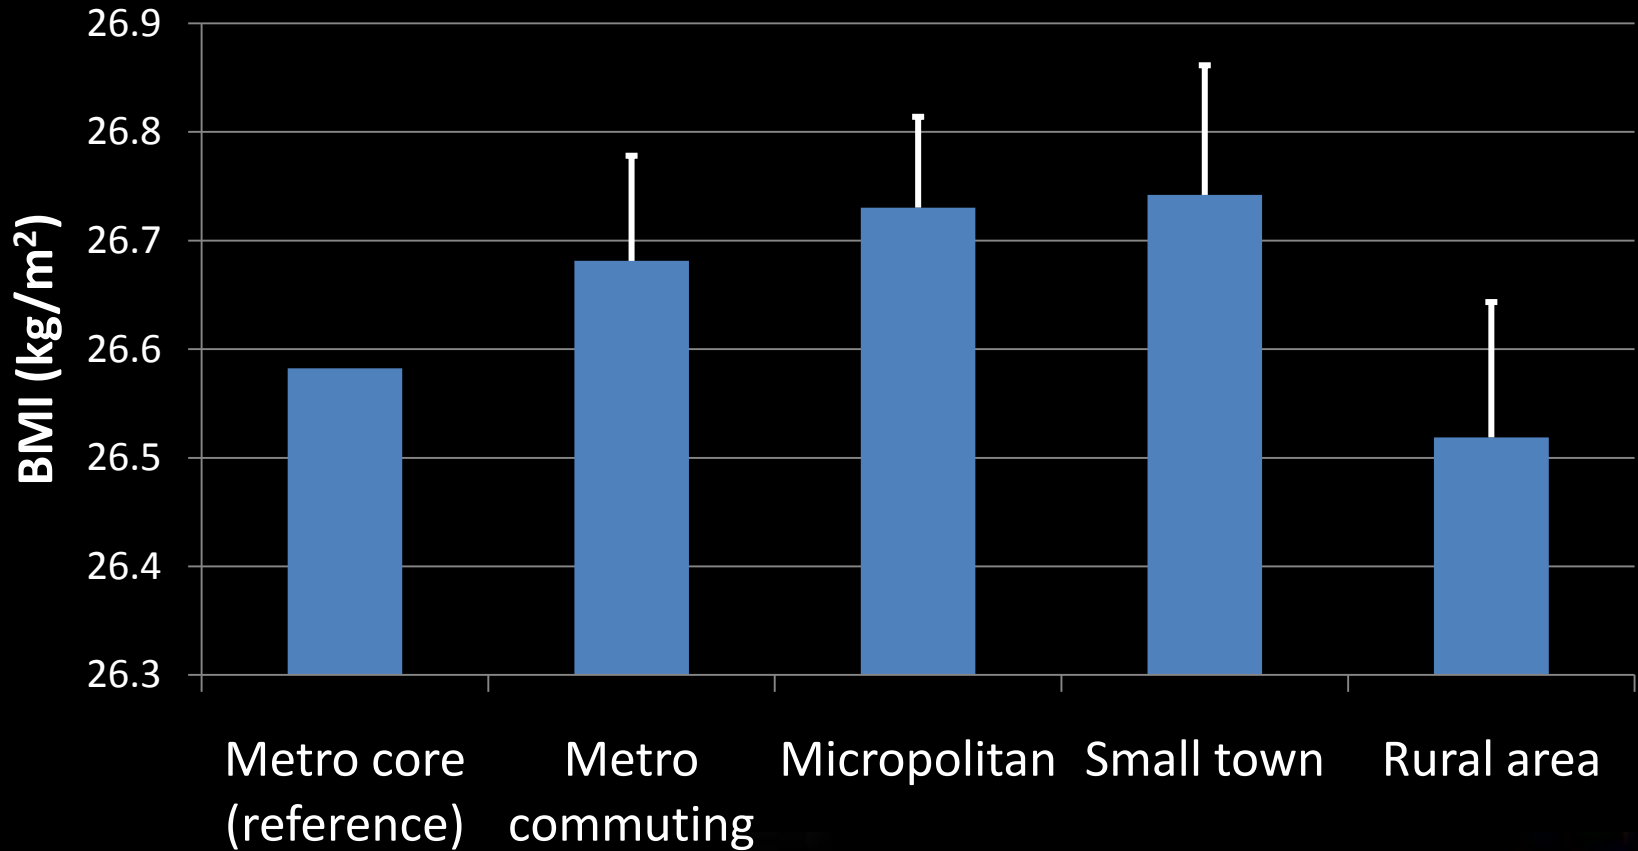

Rural Urban Commuting Areas

Legend

- Metropolitan core
- Metropolitan commuting
- Metropolitan core
- Metropolitan commuting
- Small town
- Rural

Mean BMI of census tracts

From regression analysis of age-adjusted mean BMI for 825 census tracts in Oregon, adjusted for education, race/ethnicity, and home value

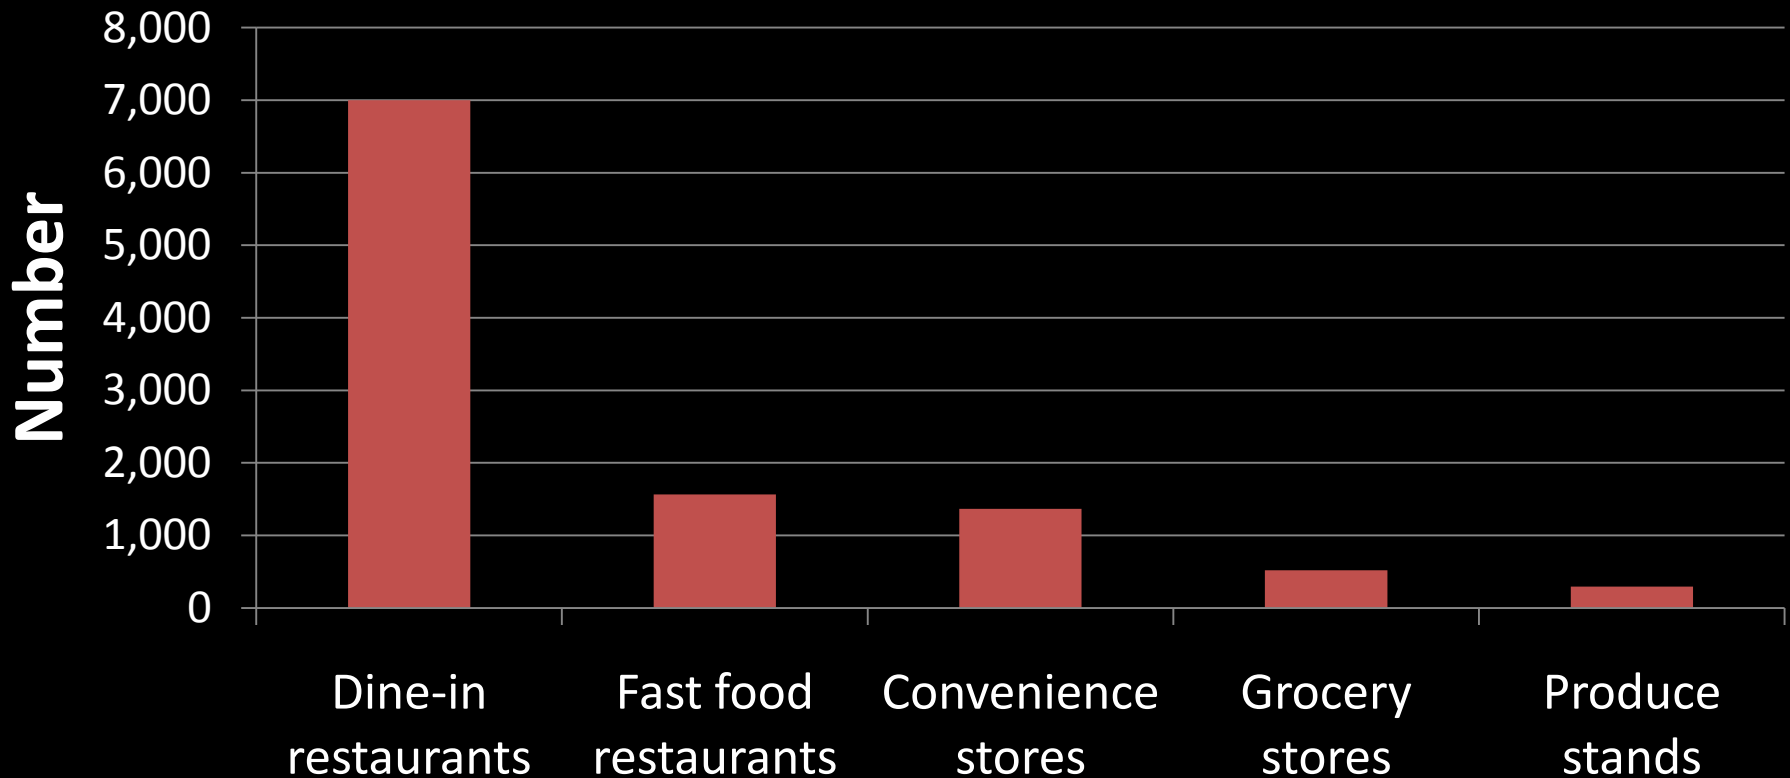

THE FOOD ENVIRONMENT

Food environment in Oregon

Oregon Employment Department,
Oregon Farmer's Market Association

Food environment by RUCA

Food environment and obesity

	Difference in average BMI
Fast food & convenience stores per square mile (per +1)	 $\beta = +0.02 \text{ kg/m}^2$
Grocery and farm stands per square mile (per +1)	 $\beta = -0.08 \text{ kg/m}^2$

From regression analysis of age-adjusted mean BMI for 825 census tracts in Oregon, adjusted for education, race/ethnicity, and home value

THE TRANSPORTATION ENVIRONMENT

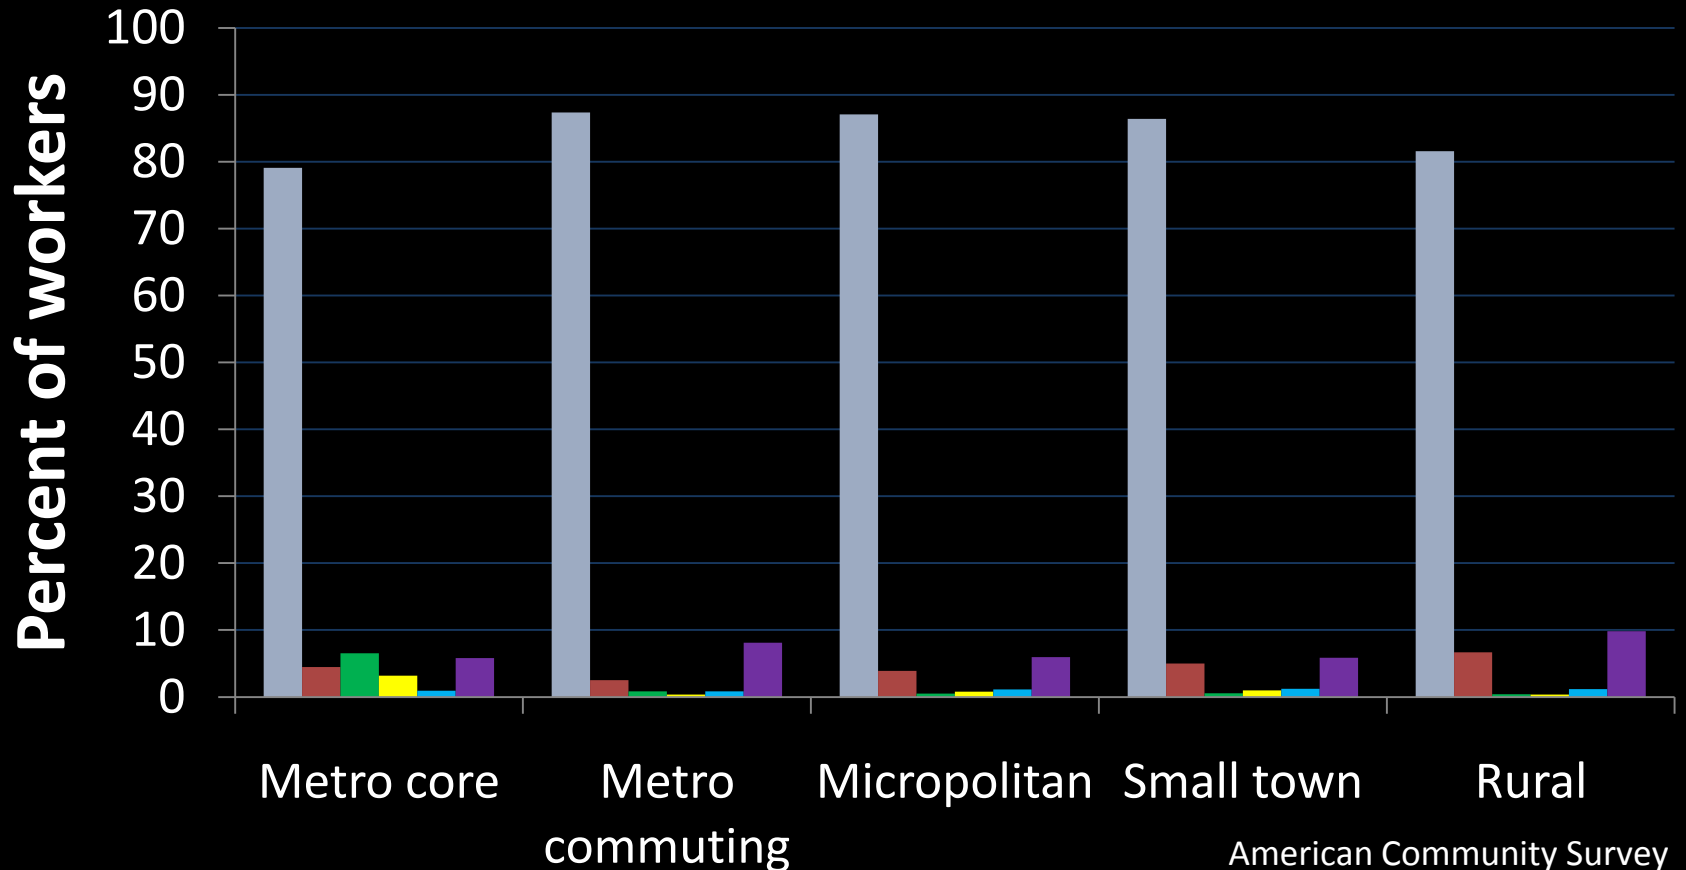

Travel in Oregon

- 1,162 miles of freeways
- 6,471 miles of arterial roads
- 186,667 miles of local roads
- ????? Sidewalks (5,330 miles in Metro)
- ????? Bike lanes (648 miles in Metro)
- 76 miles of light rail and street car tracks (+13 miles under construction)

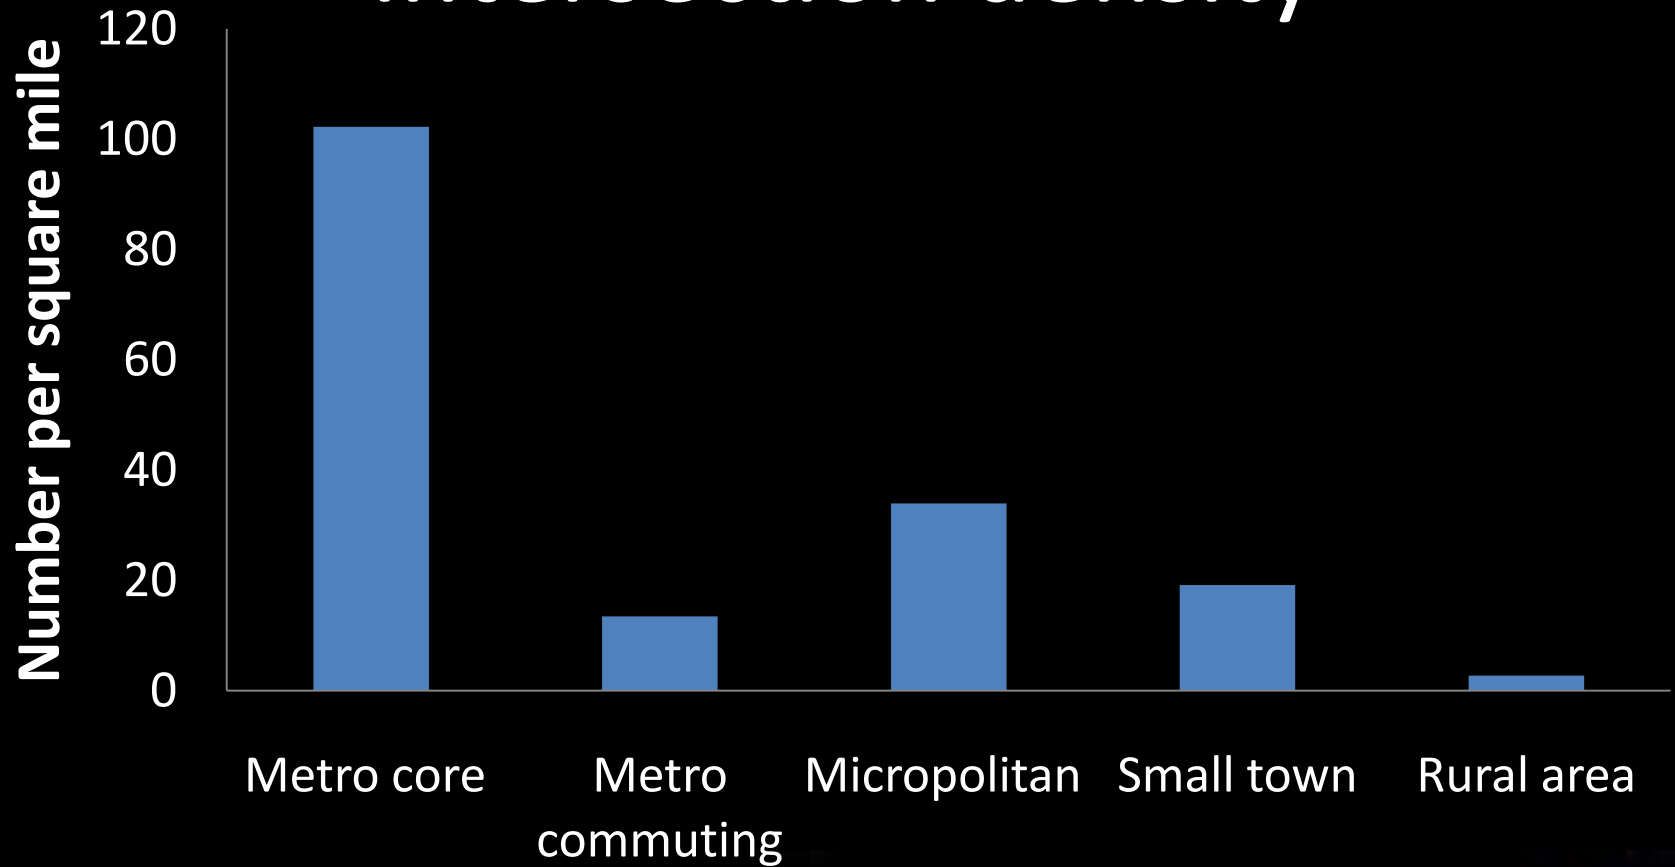

Commuting to work in Oregon

■ Car ■ Walk ■ Public transit ■ Bike ■ Other mode ■ Work at home

American Community Survey

Intersection density

Transportation and obesity

	Difference in average BMI
People commuting to work by car (per 10% increase)	 $\beta = +0.13 \text{ kg/m}^2$

From regression analysis of 825 census tracts in Oregon, adjusted for education, race/ethnicity, and home value

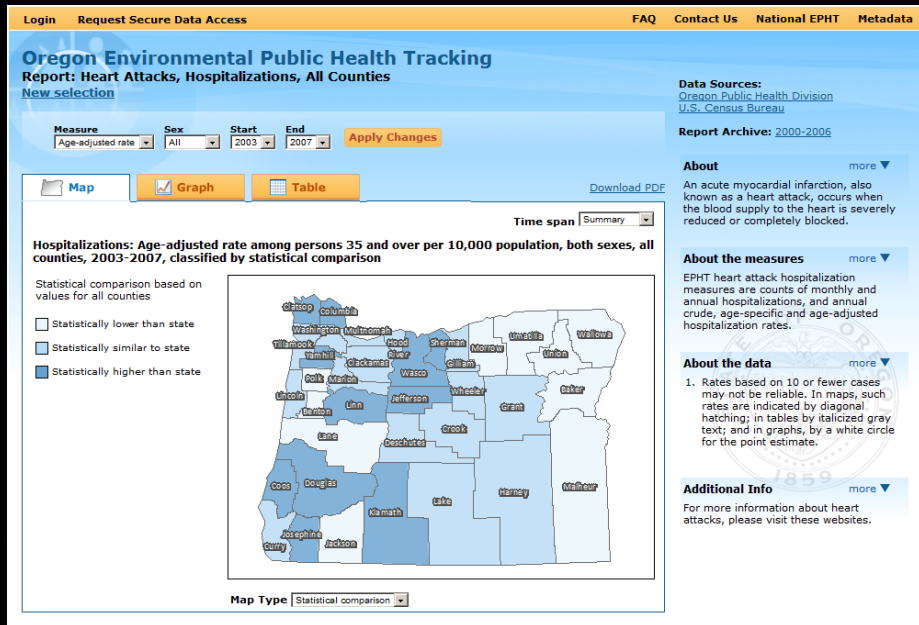

Next steps

- Regression models using proximity data
- Compare change over time
- Share findings

Thank you!
