M.T.I.'s Medical Disaster Team Response to Typhoon Yolanda

Dec 2013 – Jan 2014

The Providers

The Paramedics & Fire Fighters

Philippines Army Helps Out

Metal House

A photograph showing the aftermath of a disaster at a Pepsi plant. The main structure is a large, multi-story building with its steel framework exposed and its walls partially destroyed. Several yellow Volvo excavators are positioned in front of the building, likely involved in the demolition or cleanup process. To the left, a large white container or trailer is visible. The foreground is dominated by a large, shallow pool of water, which is surrounded by and filled with various pieces of debris, including twisted metal, wood, and plastic. The sky is overcast and grey. A utility pole is visible on the far left edge of the frame.

Pepsi Plant

The town after typhoon gusts of 235 mph.

Village with no tree tops

5 Cargo ships thrown on town by sea surge.

EVA JOCELYN

SAFETY FIRST

WAS 12

Poor Planning -100 storm surge deaths in the coliseum shelter.

Bridge out.

Crossing the bridge.

Dump Trucks in Action

Newsroom reporter Sarah
climbs aboard.

Unloading supplies

Army truck
transporting child
with wound.

6 week old infant,
weighing 1 Kilo.

Six week old infant,
Weighing 2.2 pound
with scabies.

What's wrong with
this child?

Who is sick here?

Clinic in the hills.
“No patient privacy here.”

Our hospital
solar water
sanitizer

“Wooky, wooky!”

Kids say “Goodbye”
with “Wooky, wooky”

What must they be thinking?

Melting

Rising Sea Level

Wall of Fire

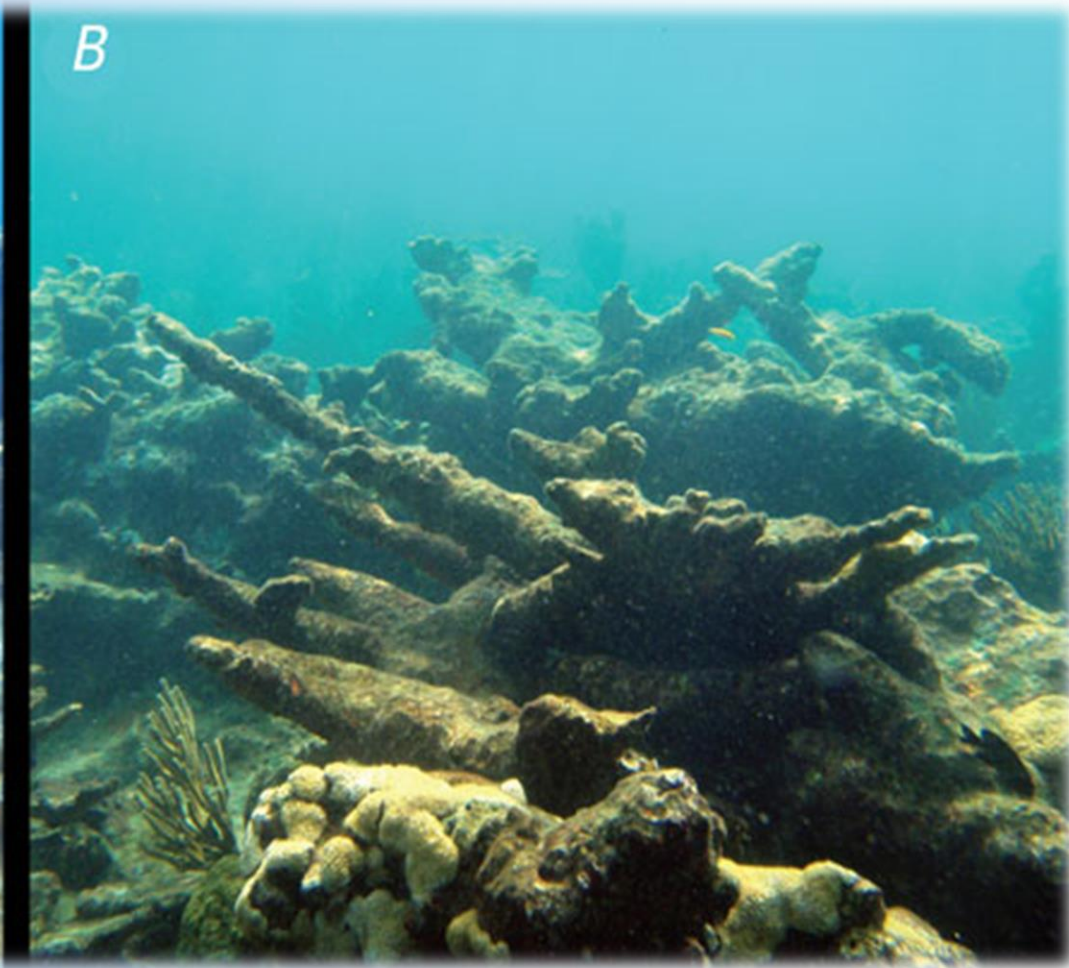

Drought,
North America 2014

A

B

Coral Death by Ocean Acidification

Technologies good news

Stanford University- Environmental Engineering Dept.
(/thesolutionsproject.org/)

has demonstrated that every state in US can get 100% of their energy from renewables technology right now (wind turbines, solar, hydro and geothermal)

Costa Rica's energy =100% renewable, right now.

All we need is the political will of the people. It depends on us.
